

Asset tracking made easy: The Sensolus solution for industrial manufacturing.

Industrial companies typically have hundreds or thousands of valuable assets such as containers, trailers, boxes, equipment or dollies. Often, you have very little data on these non-powered assets: where they are, how they are used, or even how they can be utilized better.

That's where Sensolus comes in.

Connecting these assets to the internet enables you to know where specific assets are, detect issues in your processes and ensure full visibility when working with contractors or customers. You access the collected data on our powerful analytical platform, which is ready to use from day one. The battery-powered trackers are easy to install and will work anywhere for five years. They don't require any infrastructure and you can easily scale from a small proof of concept to a fully sized project.

Return on investment

After deploying Sensolus to track its assets, a manufacturing company realized:

30%
saved in asset
management costs

80%
reduction in lost
assets

90%
reduction in wrong
pickups

500+
hours saved yearly in
manual stock counting

The challenge of manually tracking RTPs

Returnable Transport Packaging (RTPs), which carries unfinished goods between different production sites are often tracked manually or not at all. Resulting in production interruptions and transport delays. Additional challenges include:

Little to no visibility on logistics flows.

Time consuming searches and delayed WIP time.

Unforeseen inventory shortages.

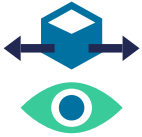

Tedious manual processes and human error.

By digitizing the process of tracking RTPs, companies can leap towards streamlining their operations, saving costs, and increasing compliance.

Get connected, create business value.

We accelerate our customers' growth by actively supporting them in creating direct value and empowering every user in their eco-system with the data and actionable insights they need in their daily tasks.

Visibility on every step of the process flow, internally and externally.

Early detection and prediction of process delays and inefficiencies

Fully automated inventory in multi-locations

Compliance with delivery and condition agreements.

Create a digital twin of your most important assets, including:

Boxes & containers

Stillages

Pallets

Other RTPs

Sensolus helps companies transform their supply chain

As Europe's leader in non-powered asset tracking, we have a track record of revolutionizing the way that industrial manufacturers operate.

"While being accurate, quick to deploy, and energy-saving, it works great! The logistics data flow has significantly increased, providing more visibility for daily operations."

Some of our customers include:

-Maxime Saraiva, Technical Specialist, Airbus
